U.S. Drought Monitor

September 20, 2016

(Released Thursday, Sep. 22, 2016)

Valid 8 a.m. EDT

Drought Impact Types:

- ~ Delineates dominant impacts
- S = Short-Term, typically less than 6 months (e.g. agriculture, grasslands)
- L = Long-Term, typically greater than 6 months (e.g. hydrology, ecology)

Intensity:

- Yellow D0 Abnormally Dry
- Light Orange D1 Moderate Drought
- Orange D2 Severe Drought
- Red-Orange D3 Extreme Drought
- Dark Red D4 Exceptional Drought

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. See accompanying text summary for forecast statements.

U.S. Seasonal Drought Outlook valid for September 15 - December 31, 2016

Drought Tendency During the Valid Period

Released September 15, 2016

Depicts large-scale trends based on subjectively derived probabilities guided by short- and long-range statistical and dynamical forecasts. Use caution for applications that can be affected by short lived events. "Ongoing" drought areas are based on the U.S. Drought Monitor areas (intensities of D1 to D4).

NOTE: The tan areas imply at least a 1-category improvement in the Drought Monitor intensity levels by the end of the period, although drought will remain. The green areas imply drought removal by the end of the period (D0 or none).

- Drought persists
- Drought remains but improves
- Drought removal likely
- Drought development likely

Looking Ahead

- ❑ Brazil and Argentina crops
 - Beginning Planting

- ❑ Harvest
 - So far the crop looks very good

- ❑ Export Situation
 - This has been the main support so far this year

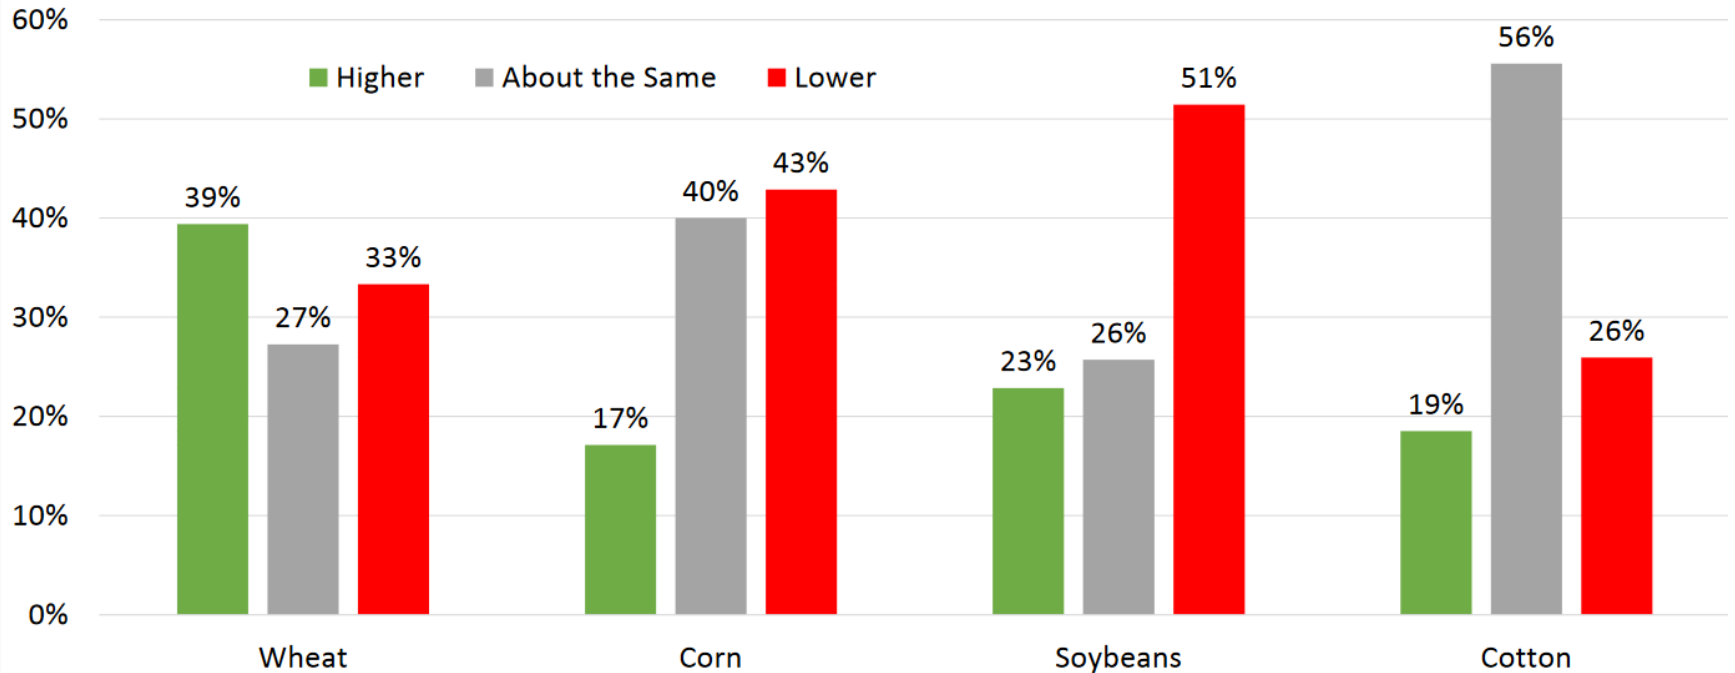

- ❑ Supply vs. Demand
 - Supply outpacing demand

JULY 2017 SOYBEANS, CME

Where do you see prices for the crops identified below 12 months from now?
